

Plug-in Rhino end-user

The TESCA Group designs and manufactures textiles and seating components for major car manufacturers.

The company's creativity and design compete with innovation, industrial excellence and respect for the environment to meet the many and growing demands of the market. It is particularly illustrated by the choice of McNeel's Rhino modelling & design software and Datakit's converters to analyse the manufacturers' technical specifications and shape every model with care and precision.

As Marc Fontfreda, IT Infrastructure and Cybersecurity Administrator, points out, « these solutions offer all the technological performance and flexibility of use required to meet their customers' ongoing expectations in terms of innovation and competitiveness. »
