Lyon, France, the 4th of March 2026

Product Focus : CrossManager CLI

CrossManager CLI Multi-CAD file converter allows **tight integration** into your workflow (PLM, background services and scripts).

It comes as a **lightweight no-GUI** executable that can run on various platforms, including **Windows, Linux and macOS**.

Convert to and from industry **standards** (JT, STEP, glTF, PDF-3D...) or **native CAD** files (CATIA, NX, Creo, SOLIDWORKS...)

Moreover, get **valuable data** after conversion in a separate XML file :

- PDM Properties, metadata
- BOMs (Bill Of Materials)
- Inventories and conversion metrics

Single centralized installation and deployment.

Perform all your conversions **without the need of third-parties** CAD software/license.

Licensing can be adapted to your organization size and software/hardware environment.
