

2008, April

## Datakit announces that its CAD Data translator plug-ins have been certified for Inventor 2009.

This certification ensures that the translators have met the standards established by Autodesk in terms of interoperability, quality and overall robustness. According to Autodesk, interoperability is a major theme for Inventor 2009 because in today's world of integrated supply chains, designers increasingly need to work with 3D data from customers and suppliers.

5 native plug-ins dedicated to Inventor (read, write) are available on [www.datakit.com](http://www.datakit.com). They do not request any additional licenses as for example CATIA V4, CATIA V5 or Solidworks and allow quick and reliable translation of parts as well as assemblies. Among them, Catia V5 to Inventor is the best selling translator. It is available on Windows platforms, 32 and 64 bits supported for Inventor 2009

Datakit is really satisfied to benefit from this recognition and happy to provide the best of its technology to its complete community.
